

What? *A car drag race game, where you can customize, modify, tune your car and create a collection of your choice and your dream car. Having a car set and ready to race, two players are paired within the same levels and race.*

Why? *I designed this game because I myself love cars and hope to one day customize and work on my own car. And there aren't as many games that have all these features to be enjoying a good drag race game.*

For who? *This mainly targets those who are over 18 and have a passion for cars and love to see races and wish they can race on their own. It also targets those who would want to learn more and experiment with cars .*

This game i created allows players to customize, modify, and tune their cars, creating a personalized collection of dream vehicles for drag races against others that they cant do irl . Designed for car lovers, especially those over 18, and want to experiment with different customizations. I created this game because of my own passion for cars and the lack of games that are offer such a detailed drag racing experience. It's perfect for those who want to race, learn, and explore car modifications in a fun and engaging way.
